Press Release

Data Techniques releases new version of ImageMan ActiveX Imaging toolkit

Burnsville, NC, March 8, 2004: Data Techniques Inc. a leading developer of imaging libraries today announced the release of its ImageMan Version 8 toolkit. This release provides additional functionality allowing developers to build high quality, leading edge imaging applications with minimal code and in the shortest possible time. The toolkit is available as both ActiveX controls and DLL libraries.

Among the new features are:

- Support for reading and writing JPEG2000 compressed images
- Support for 16 and 32 bit color depths
- The ability to obtain image specific attributes from loaded images
- New lightweight Image and Twain controls
- Support for reading and writing standard and custom TIFF tag data
- Support for reading and writing custom image data in formats such as PNG, GIF, TIF
- The ability to utilize the image control in ASP and ASP.NET server applications
- Deskew support for fixing scanned images
- Full transparency support
- Image merge support for combining images
- and much more.

Additional information about the ImageMan Toolkits can be found on the Data Techniques website at www.data-tech.com. Pricing and upgrade information can be obtained on the website or via email from sales@data-tech.com.

For Release 9 a.m. EDT, March 8, 2004
