FOR IMMEDIATE RELEASE

Data Techniques, Inc. Release ImageMan.Net Version 2 *Royalty Free OCR and Imaging for .Net development*

Burnsville, NC, March 22, 2010, Data Techniques, Inc., a leading developer of imaging and facsimile development tools, today released ImageMan.Net Version 2. New features and updates include the Document Edition which includes Royalty Free OCR, Annotation support, drawing classes and support for reading and writing PDF/A and writing searchable PDF files with the optional PDF Import & Export support.

ImageMan.Net toolkit is a set of 100% Managed .NET classes and WinForms controls for building imaging and document management applications in .NET. It supports reading and writing many image formats including TIFF, BMP, FAX, DIB, RLE, PCX, DCX, JPG, JPEG2000, PNG, GIF, WMF, EMF and PDF (Import & Export with optional PDF Addons). The object oriented architecture simplifies development and ImageMan.Net includes high and low level functionality for quick development and ultimate control.

New Features in all ImageMan.Net Editions

- Drawing classes support drawing on all images at their native bit depths
- Performance and Misc enhancements to the Codecs
- Enhancements to the Viewer and ThumbnailViewer controls

New Features in the Document Edition

- OCR - Royalty Free distribution
- Annotations Support including Annotation component and Annotation Toolstrip component, support for reading/writing Wang compatible annotations
- Document Processing Commands including Blank Page Detection, Border removal, Despeckle and more

John Davis, CEO of Data Techniques Inc, said "ImageMan.Net Version 2 provides customers with cutting edge image processing technology, allowing developers to create truly powerful document and imaging applications on the desktop or on the web. With the ImageMan.Net Version 2 Document Edition, developers can now easily build document management applications with royalty free OCR, Annotation support, TWAIN scanning and a complete suite suite of document processing

commands.”
